# Making the right abstractions

when building a platform

### **About the speaker**

Name : **Henrik Høegh** 

Platform engineer at Lunar

Part of **Squad Odyssey** 

Interests:

Cloud Native, Dungeon & Dragons

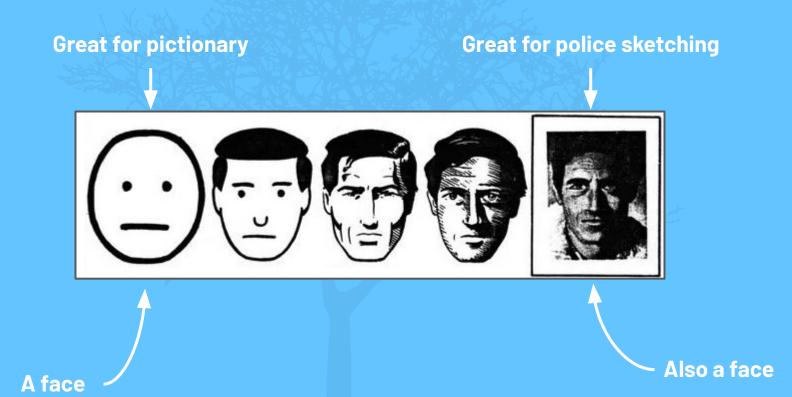

## So... what is an abstraction

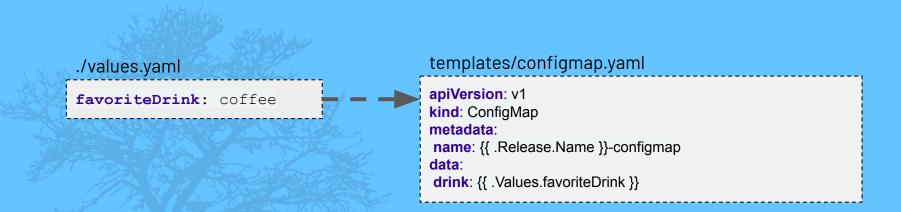

LUNAR®

#### **Definition of abstract**

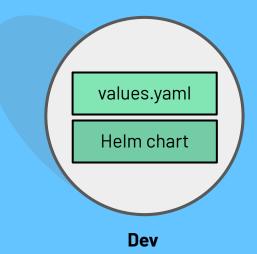

#### Helm is abstracting <u>away</u> details

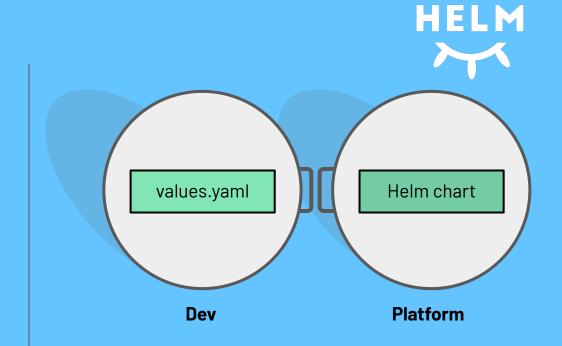

#### **But only if....**

Nothing is abstracted **away**, you've only added complexity

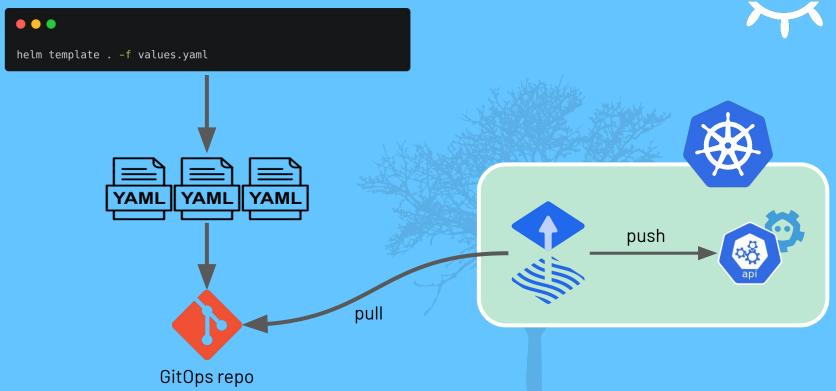

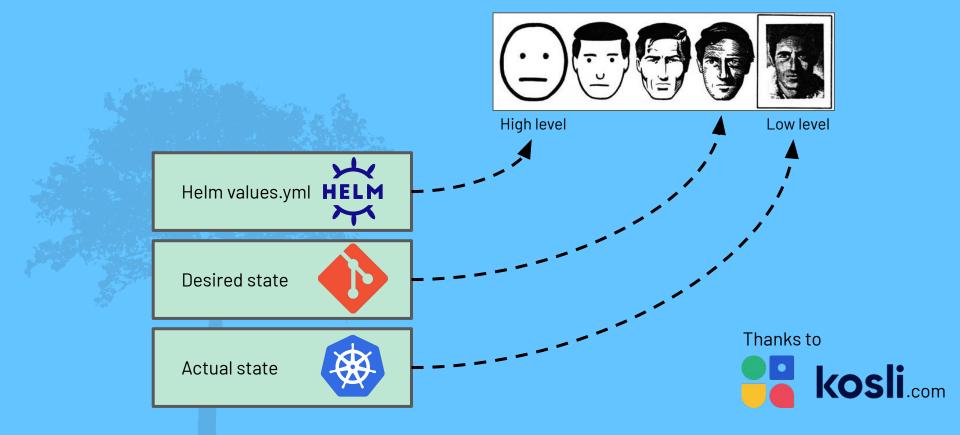

#### **Using Helm with GitOps**

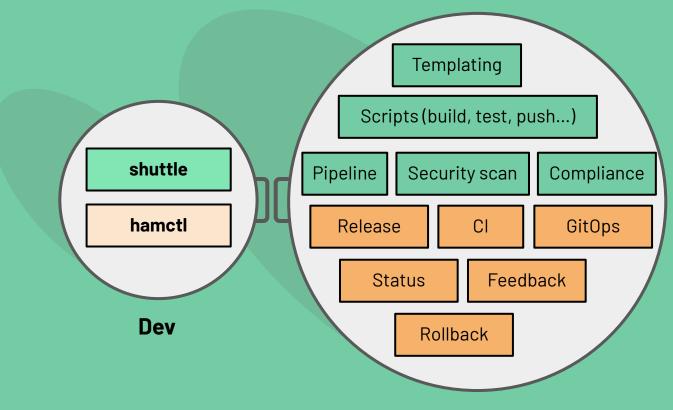

#### **Desired state != Actual state**

#### At Lunar we abstract the complex parts away

**Platform** 

#### **Developer feedback from Ham**

hamctl APP 12:24 PM

Build for: lunar-way-humio-exporter

Branch: dependabot/enable-dependabot-on-dockerimage

✓ Build (quay.io/lunarway/lunar-way-humio-exporter:dependabot\_enable-

dependabot-on-dockerimage-8ae98cd550-bbbaaa1540)

Snyk - Docker (high: 0, medium: 0, low: 0)

✓ Push (quay.io/lunarway/lunar-way-humio-exporter:dependabot\_enable-

dependabot-on-dockerimage-8ae98cd550-bbbaaa1540)

Artifact pushed: dependabot\_enable-dependabot-on-dockerimage-8ae98cd550-bbbaaa1540

#### And we have a lot of other developer tools

#### Paved path vs opt-out
